RFC 9215
Using GOST R 34.10-2012 and GOST R 34.11-2012 Algorithms with the Internet X.509 Public Key Infrastructure

Abstract

This document describes encoding formats, identifiers, and parameter formats for the GOST R 34.10-2012 and GOST R 34.11-2012 algorithms for use in the Internet X.509 Public Key Infrastructure (PKI).

This specification is developed to facilitate implementations that wish to support the GOST algorithms. This document does not imply IETF endorsement of the cryptographic algorithms used in this document.

Status of This Memo

This document is not an Internet Standards Track specification; it is published for informational purposes.

This is a contribution to the RFC Series, independently of any other RFC stream. The RFC Editor has chosen to publish this document at its discretion and makes no statement about its value for implementation or deployment. Documents approved for publication by the RFC Editor are not candidates for any level of Internet Standard; see Section 2 of RFC 7841.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at https://www.rfc-editor.org/info/rfc9215.

Table of Contents

1. Introduction

This document describes the conventions for using the GOST R 34.10-2012 signature algorithm [GOSTR3410-2012] [RFC7091] and the GOST R 34.11-2012 hash function [GOSTR3411-2012] [RFC6986] in the Internet X.509 Public Key Infrastructure (PKI) [RFC5280].

This specification defines the contents of the signatureAlgorithm, signatureValue, signature, and subjectPublicKeyInfo fields within X.509 Certificates and Certificate Revocation Lists (CRLs). For each algorithm, the appropriate alternatives for the keyUsage certificate extension are provided.

This specification is developed to facilitate implementations that wish to support the GOST algorithms. This document does not imply IETF endorsement of the cryptographic algorithms used in this document.

1.1. Requirements Language

The key words "**MUST**", "**MUST NOT**", "**REQUIRED**", "**SHALL**", "**SHALL NOT**", "**SHOULD**", "**SHOULD NOT**", "**RECOMMENDED**", "**NOT RECOMMENDED**", "**MAY**", and "**OPTIONAL**" in this document are to be interpreted as described in BCP 14 [RFC2119] [RFC8174] when, and only when, they appear in all capitals, as shown here.

2. Signature Algorithm Support

Conforming Certificate Authorities (CAs) **MAY** use the GOST R 34.10-2012 signature algorithm to sign certificates and CRLs. This signature algorithm **MUST** always be used with the GOST R 34.11-2012 hash function. It may use a key length of either 256 bits or 512 bits.

The ASN.1 object identifier (OID) used to identify the GOST R 34.10-2012 signature algorithm with a 256-bit key length and the GOST R 34.11-2012 hash function with a 256-bit hash code is:

```
id-tc26-signwithdigest-gost3410-12-256 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) signwithdigest(3) gost3410-12-256(2)}
```

The GOST R 34.10-2012 signature algorithm with a 256-bit key length generates a digital signature in the form of two 256-bit integers: r and s. Its octet string representation consists of 64 octets, where the first 32 octets contain the big-endian representation of s and the second 32 octets contain the big-endian representation of r.

The ASN.1 OID used to identify the GOST R 34.10-2012 signature algorithm with a 512-bit key length and the GOST R 34.11-2012 hash function with a 512-bit hash code is:

```
id-tc26-signwithdigest-gost3410-12-512 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) signwithdigest(3) gost3410-12-512(3)}
```

The GOST R 34.10-2012 signature algorithm with a 512-bit key length generates a digital signature in the form of two 512-bit integers: r and s. Its octet string representation consists of 128 octets, where the first 64 octets contain the big-endian representation of s and the second 64 octets contain the big-endian representation of r.

When either of these OIDs is used as the algorithm field in an AlgorithmIdentifier structure, the encoding **MUST** omit the parameters field.

The described definition of a signature value is directly usable in the Cryptographic Message Syntax (CMS) [RFC5652], where such values are represented as octet strings. However, signature values in certificates and CRLs [RFC5280] are represented as bit strings, and thus the octet string representation must be converted.

To convert an octet string signature value to a bit string, the most significant bit of the first octet of the signature value **SHALL** become the first bit of the bit string, and so on through the least significant bit of the last octet of the signature value, which **SHALL** become the last bit of the bit string.

3. Hash Function Support

The ASN.1 OID used to identify the GOST R 34.11-2012 hash function with a 256-bit hash code is:

```
id-tc26-gost3411-12-256 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) digest(2) gost3411-12-256(2)}
```

The ASN.1 OID used to identify the GOST R 34.11-2012 hash function with a 512-bit hash code is:

```
id-tc26-gost3411-12-512 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) digest(2) gost3411-12-512(3)}
```

When either of these OIDs is used as the algorithm field in an AlgorithmIdentifier structure, the encoding **MUST** omit the parameters field.

4. Subject Public Keys Information Fields

4.1. Public Key Identifiers

GOST R 34.10-2012 public keys with a 256-bit private key length are identified by the following OID:

```
id-tc26-gost3410-12-256 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) sign(1) gost3410-12-256(1)}
```

GOST R 34.10-2012 public keys with a 512-bit private key length are identified by the following OID:

```
id-tc26-gost3410-12-512 OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        algorithms(1) sign(1) gost3410-12-512(2)}
```

4.2. Public Key Parameters

When either of these identifiers appears as the algorithm field in the SubjectPublicKeyInfo.algorithm.algorithm field, the parameters field **MUST** have the following structure:

```
GostR3410-2012-PublicKeyParameters ::= SEQUENCE
    {
        publicKeyParamSet OBJECT IDENTIFIER,
        digestParamSet OBJECT IDENTIFIER OPTIONAL
    }
```

where:

- `publicKeyParamSet` is the public key parameters identifier for GOST R 34.10-2012 parameters (see Sections 5.1.1 and 5.2.1 of [RFC7836] or Appendix C) or GOST R 34.10-2001 parameters (see Section 8.4 of [RFC4357]).
- `digestParamSet` is the parameters identifier for the corresponding GOST R 34.11-2012 parameters (see Section 3).

The following values, when used as `publicKeyParamSet`, define test public key parameter sets and **MUST NOT** be used outside of testing scenarios:

- `id-GostR3410-2001-TestParamSet`
- `id-tc26-gost-3410-2012-512-paramSetTest`

The `digestParamSet` field:

- **SHOULD** be omitted if the GOST R 34.10-2012 signature algorithm is used with a 512-bit key length
- **MUST** be present and must be equal to `id-tc26-digest-gost3411-12-256` if one of the following values is used as `publicKeyParamSet`:
  - `id-GostR3410-2001-TestParamSet`
  - `id-GostR3410-2001-CryptoPro-A-ParamSet`
  - `id-GostR3410-2001-CryptoPro-B-ParamSet`
  - `id-GostR3410-2001-CryptoPro-C-ParamSet`
  - `id-GostR3410-2001-CryptoPro-XchA-ParamSet`
  - `id-GostR3410-2001-CryptoPro-XchB-ParamSet`
- **SHOULD** be omitted if publicKeyParamSet is equal to:
  - `id-tc26-gost-3410-2012-256-paramSetA`
- **MUST** be omitted if one of the following values is used as publicKeyParamSet:
  - `id-tc26-gost-3410-2012-256-paramSetB`
  - `id-tc26-gost-3410-2012-256-paramSetC`

- `id-tc26-gost-3410-2012-256-paramSetD`

4.3. Public Key Encoding

The GOST R 34.10-2012 public key **MUST** be ASN.1 DER encoded as an OCTET STRING. This encoding **SHALL** be used as the content (i.e., the value) of the subjectPublicKey field (a BIT STRING) of the SubjectPublicKeyInfo structure.

```
GostR3410-2012-256-PublicKey ::= OCTET STRING (SIZE(64))
GostR3410-2012-512-PublicKey ::= OCTET STRING (SIZE (128))
```

`GostR3410-2012-256-PublicKey` **MUST** contain 64 octets, where the first 32 octets contain the little-endian representation of the `x` coordinate of the public key and the second 32 octets contain the little-endian representation of the `y` coordinate of the public key.

`GostR3410-2012-512-PublicKey` **MUST** contain 128 octets, where the first 64 octets contain the little-endian representation of the `x` coordinate of the public key and the second 64 octets contain the little-endian representation of the `y` coordinate of the public key.

4.4. Key Usage Extension

If the KeyUsage extension is present in a certificate with the GOST R 34.10-2012 public key, the following values **MAY** be present:

- `digitalSignature` (0)
- `contentCommitment` (1)
- `keyEncipherment` (2)
- `dataEncipherment` (3)
- `keyAgreement` (4)
- `keyCertSign` (5)
- `cRLSign` (6)
- `encipherOnly` (7)
- `decipherOnly` (8)

Note that `contentCommitment` was named `nonRepudiation` in previous versions of X.509.

If the key is going to be used for key agreement, the `keyAgreement` flag **MUST** be present in the `KeyUsage` extension, with the `encipherOnly` and `decipherOnly` flags being optional. However, the `encipherOnly` and `decipherOnly` flags **MUST NOT** be present simultaneously.

5. Qualified Certificate Extensions

This section defines additional OIDs for use in qualified certificates for checking digital signatures.

5.1. Distinguished Name Additions

OGRN is the main state registration number of juridical entities.

```
OGRN ::= NUMERIC STRING (SIZE(13))
```

The corresponding OID is `1.2.643.100.1`.

SNILS is the individual insurance account number.

```
SNILS ::= NUMERIC STRING (SIZE(11))
```

The corresponding OID is `1.2.643.100.3`.

INNLE is the individual taxpayer number (ITN) of the legal entity.

```
INNLE ::= NUMERIC STRING (SIZE(10))
```

The corresponding OID is `1.2.643.100.4`.

OGRNIP is the main state registration number of individual entrepreneurs (sole traders).

```
OGRNIP ::= NUMERIC STRING (SIZE(15))
```

The corresponding OID is `1.2.643.100.5`.

IdentificationKind represents the way the receiver of the certificate was identified by the CA.

```
IdentificationKind ::= INTEGER { personal(0), remote-cert(1),
            remote-passport(2), remote-system(3) }
```

The corresponding OID is `1.2.643.100.114`.

INN is the individual taxpayer number (ITN).

```
INN ::= NUMERIC STRING (SIZE(12))
```

The corresponding OID is `1.2.643.3.131.1.1`.

5.2. Certificate Policies

The Russian national regulation body for cryptography defines several security levels of cryptographic tools. Depending on the class of cryptographic token used by the certificate owner, the following OIDs must be included in certificate policies. Certificates should include OIDs, starting from the lowest (KC1) up to the strongest applicable.

- `1.2.643.100.113.1` - class KC1
- `1.2.643.100.113.2` - class KC2
- `1.2.643.100.113.3` - class KC3
- `1.2.643.100.113.4` - class KB1
- `1.2.643.100.113.5` - class KB2
- `1.2.643.100.113.6` - class KA1

5.3. Subject Sign Tool

To denote the token or software type used by the certificate owner, the following non-critical `SubjectSignTool` extension with OID `1.2.643.100.111` should be included. It is defined as

```
SubjectSignTool ::= UTF8String(SIZE(1..200))
```

5.4. Issuer Sign Tool

To denote the tools used to generate key pairs and tools used by the CA to sign certificates, the following non-critical `IssuerSignTool` extension with OID `1.2.643.100.112` should be included. It is defined as

```
IssuerSignTool ::= SEQUENCE {
  signTool     UTF8String(SIZE(1..200)),
  cATool       UTF8String(SIZE(1..200)),
  signToolCert UTF8String(SIZE(1..100)),
  cAToolCert   UTF8String(SIZE(1..100)) }
```

where:

- `signTool` identifies tools used to create key pairs.
- `cATool` identifies tools used by the CA.
- `signToolCert` and `cAToolCert` contain the notice of the conformance of respective tools to Russian federal law on digital signatures.

6. Historical Considerations

Note that, for a significant period of time, there were no documents describing `GostR3410-2012-PublicKeyParameters`. Several old implementations have used `GostR3410-2001-PublicKeyParameters` instead. These implementations will return an error if the `digestParamSet` field is not included in public key parameters. Thus, an implementation wishing to collaborate with old implementations might want to include `digestParamSet` equal to `id-tc26-digest-gost3411-12-512` if one of the following values is used as `publicKeyParamSet`:

- `id-tc26-gost-3410-12-512-paramSetA`
- `id-tc26-gost-3410-12-512-paramSetB`

Note that the usage of `keyEncipherment` and `dataEncipherment` values for the `KeyUsage` extension is not fully defined for the GOST R 34.10-2012 public keys, so they **SHOULD** be used with additional care.

7. IANA Considerations

This document has no IANA actions.

8. Security Considerations

It is **RECOMMENDED** that applications verify signature values and subject public keys to conform to the GOST R 34.10-2012 standard [GOSTR3410-2012] [RFC7091] prior to their use.

It is **RECOMMENDED** that CAs and applications make sure that the private key for creating signatures is not used for more than its allowed validity period (typically 15 months for the GOST R 34.10-2012 algorithm).

Test parameter sets (`id-GostR3410-2001-TestParamSet` and `id-tc26-gost-3410-2012-512-paramSetTest`) **MUST NOT** be used outside of testing scenarios. The use of parameter sets not described herein is **NOT RECOMMENDED**. When different parameters are used, it is **RECOMMENDED** that they be subjected to examination by an authorized agency with approved methods of cryptographic analysis.

For security discussions concerning the use of algorithm parameters, see [ANS17] and the Security Considerations sections in [RFC4357] and [RFC7836].

```

Appendix C. Public Key Parameters

Here we define three new OIDs for three existing public key parameter sets defined in [RFC4357]. These OIDs **MUST** be used with GOST R 34.10-2012 public keys only.

```
id-tc26-gost-3410-2012-256-paramSetB OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        constants(2) sign-constants(1) gost-3410-12-256-constants(1)
          paramSetB(2)}
```

The elliptic curve of this parameter set is the same as that of `id-GostR3410-2001-CryptoPro-A-ParamSet` (and `id-GostR3410-2001-CryptoPro-XchA-ParamSet`), which can be found in [RFC4357].

```
id-tc26-gost-3410-2012-256-paramSetC OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        constants(2) sign-constants(1) gost-3410-12-256-constants(1)
          paramSetC(3)}
```

The elliptic curve of this parameter set is the same as that of `id-GostR3410-2001-CryptoPro-B-ParamSet`, which can be found in [RFC4357].

```
id-tc26-gost-3410-2012-256-paramSetD OBJECT IDENTIFIER ::=
    { iso(1) member-body(2) ru(643) rosstandart(7) tc26(1)
        constants(2) sign-constants(1) gost-3410-12-256-constants(1)
          paramSetD(4)}
```

The elliptic curve of this parameter set is the same as that of `id-GostR3410-2001-CryptoPro-C-ParamSet` (and `id-GostR3410-2001-CryptoPro-XchB-ParamSet`), which can be found in [RFC4357].

Appendix D. Test Examples

D.1. GOST R 34.10-2001 Test Parameters (256-Bit Private Key Length)

This example uses the curve defined in Section 7.1 of [RFC7091].

The private key is

```
d = 0x7A929ADE789BB9BE10ED359DD39A72C1\\
      1B60961F49397EEE1D19CE9891EC3B28
```

The public key is

```
x = 0x7F2B49E270DB6D90D8595BEC458B50C5\\
      8585BA1D4E9B788F6689DBD8E56FD80B

y = 0x26F1B489D6701DD185C8413A977B3CBB\\
      AF64D1C593D26627DFFB101A87FF77DA
```

Appendix E. GOST R 34.10-2012 Test Parameters (Curve Definition)

The following parameters must be used for digital signature generation and verification.

E.1. Elliptic Curve Modulus

The following value is assigned to parameter p in this example:

```
p = 36239861022290036359077887536838743060213209255346786050\\
    86546150450856166624002482588482022271496854025090823603\\
    05873516373426382237196498722858290737240 3
```

```
p = 0x4531ACD1FE0023C7550D267B6B2FEE80922B14B2FFB90F04D4EB7C\\
      09B5D2D15DF1D852741AF4704A0458047E80E4546D35B8336FAC22\\
      4DD81664BBF528BE6373
```

E.2. Elliptic Curve Coefficients

Parameters a and b take the following values in this example:

```
a = 7
```

```
a = 0x7
```

```
b = 15186550692108285345089500347140431549287475277402064361\\
    94018823352809982443793732829756914785974674866041605397\\
    88367759662632641399013695904743581182639 6
```

```
b = 0x1CFF0806A31116DA29D8CFA54E57EB748BC5F377E49400FDD788B6\\
      49ECA1AC4361834013B2AD7322480A89CA58E0CF74BC9E540C2ADD\\
      6897FAD0A3084F302ADC
```

E.3. Elliptic Curve Points Group Order

Parameter m takes the following value in this example:

```
m = 36239861022290036359077887536838743060213209255346786050\\
    86546150450856166623969164898305032863068499961404079437\\
    93658545586519221297073480881261812061 9743
```

```
m = 0x4531ACD1FE0023C7550D267B6B2FEE80922B14B2FFB90F04D4EB7C\\
      09B5D2D15DA82F2D7ECB1DBAC719905C5EECC423F1D86E25EDBE23\\
      C595D644AAF187E6E6DF
```

E.4. Order of Cyclic Subgroup of Elliptic Curve Points Group

Parameter q takes the following value in this example:

```
q = 3623986102229003635907788753683874306021320925534678605O\\
    8654615045085616662396916489830503286306849996140407943 7\\
    9365854558651922129707348088126181206197 43
```

```
q = 0x4531ACD1FE0023C7550D267B6B2FEE80922B14B2FFB90F04D4EB7C\\
      09B5D2D15DA82F2D7ECB1DBAC719905C5EECC423F1D86E25EDBE23\\
      C595D644AAF187E6E6DF
```

E.5. Elliptic Curve Point Coordinates

Point P coordinates take the following values in this example:

```
x = 1928356944067022849399309401243137598997786635459507 9743\\
    5707549130776659268583544106555768100318487481965800 4903\\
    2123328842523358302507295276323834935732 74
```

```
x = 0x24D19CC64572EE30F396BF6EBBFD7A6C5213B3B3D7057CC825F910\\
      93A68CD762FD60611262CD838DC6B60AA7EEE804E28BC849977FAC\\
      33B4B530F1B120248A9A
```

```
y = 2288728693371972859970012155529478416353562327329506 1803\\
    1449742593110286030157281414199707227170880706659385065 0\\
